# CellGuard

Instant and reliable voice communication between staff or between staff and inmates is an essential requirement of modern prisons – protecting officers and ensuring an adequate duty of care in today’s environment of low staffing levels. CellGuard, developed and manufactured by Austco, the world’s most respected manufacturer of speech based call systems, is designed specifically for high security prisons. CellGuard provides the complete audio communication solution in one reliable product, including officer duress, cell intercom, discrete monitoring, door intercom, background music distribution and public address announcements.

Utilizing TCP/IP technology, coupled with fibre optic links, ensures immediate full duplex communications between inmates and officers. All data and voice links are digitally recorded at the gatehouse control, eliminating old fashioned tape decks and online printers.

An entire site may be monitored, actioned and administered via the Central Controller or may be subcontracted to any Officer Station. Each Officer Station is configured to operate via fibre optic links to the Central Controller and controls cell and door access intercoms in its cell block. Supervisory staff are able to make contact with any cell via the Officer Station or via the Central Control handset. Public address announcements may be made in the same manner. After

hours, the Officer Station may be routed to another Officer’s Station or to a centralised location. This redirection allows flexible staffing arrangements to minimise the costs associated with overtime and night shift.

All intercom points and Officer Stations are constructed of stainless steel and all components are vandal proof, fluid resistant and employ tamper monitoring. Additionally, all Call buttons are continuously monitored, utilising a highly sophisticated self-diagnostic function. Call operation is periodically simulated to ensure button, microphone and speaker operation. This innovation has earned CellGuard the reputation of being the worlds most reliable and trusted custodial intercom product.

## ABOUT AUSTCO

Austco is a wholly owned subsidiary of Azure Healthcare Limited, an international provider of healthcare & custodial communication solutions. The company is headquartered in Australia, has subsidiaries in six countries and supports more than 6,000 facilities through our global reseller network. Azure Healthcare (symbol ASX:AZV) is listed on the Australian Stock Exchange.
