Imagine a Health Care environment with real time connections between Health Care professionals and patients at all times. No more reactive technologies, cluttered stations and hard to use software. No more patient complaints or unattended calls, delays in responding to emergency calls and running around looking for nurses or caregivers.

TACERA is the world's first true fully IP solution for nurse call and healthcare communication systems where every system component has its own IP address and uses VOIP exclusively.

Tacera is an advanced IP based nurse call solution for healthcare facilities that provides "plug-and-play" functionality. This minimizes the cost of installation and commissioning, as well as making ongoing maintenance more cost effective - reducing the total cost of ownership of the system.

Calls may be displayed on pagers, DECT and VoIP based wireless telephones, quickly alerting staff that a call has been activated. Tacera's VoIP interface enables crystal clear voice communications between nursing staff and the patient, without the need for third party middleware.

Additionally, all your clinical alarm systems, such as Patient Monitoring, Ventilators, IV Pumps and Stat Lab results may be integrated into Tacera allowing "one click" staff allocation for all mission critical alerts.

Tacera features user-friendly and aesthetically appealing patient call points, over door lights and multi-coloured annunciator displays. Combined with state-of-the-art microprocessor controllers, touch screen staff stations and nurse to patient two way speech facilities, Tacera ensures a rapid, effective and appropriate response to patient calls.

ABOUT AUSTCO

Austco is a wholly owned subsidiary of Azure Healthcare Limited, an international provider of healthcare communication and clinical workflow management solutions. The company is headquartered in Australia, has subsidiaries in six countries and supports more than 6,000 healthcare facilities through our global reseller network.
